

Rock Climbing

Rock climbing is scored on three separate disciplines. Speed climbing, bouldering and lead climbing. An athlete's discipline placements are multiplied together for a final score. The climber with the lowest final score wins gold.

Speed Climbing

Two climbers compete side by side on a 15 meter rock wall. Winner moves on in a bracket formatted competition. The bracket competition winner gets just a 1 to multiply with their other two placements.

Bouldering

Climbers try get to the top of four boulders. They will have just four minutes to get to the top. If a climber can't get to the top they will try to get to a "hold zone" or make another attempt. Winner is determined by the number of tops, attempts and hold zones.

Lead

Climbers climb as high as they can on a rock wall with a time limit. Each hold is worth a point. The higher the climber climbs, the more points earned.
